Logical Access Policy and Procedures

Generated: January 12, 2026

4.4.1. Confidential Information (e.g., CAD designs, firmware, ASIC designs, customer sales data):

- a. Storage:** Must be stored in secured locations with restricted access (e.g., encrypted network drives, secure cloud storage like SharePoint with strict permissions, dedicated secured folders in GitLab for code). Physical confidential documents must be in locked cabinets or secure rooms.
- b. Access:** Strict Need-to-Know basis. Access granted only after formal approval by Asset Owner. Logical access controls (user authentication, strong passwords, MFA) are mandatory.
- c. Transmission:** Must be transmitted using secure, encrypted channels (e.g., encrypted email, secure file transfer protocols, VPN for internal access). Avoid public file-sharing services.
- d. Processing:** Processed only on secured devices (e.g., company-managed workstations with Windows Defender for Business and Intune policies). Do not process on personal devices unless specifically authorized and secured.
- e. Physical Handling:** Keep out of sight when not in use. Do not leave unattended on desks. Shred or cross-shred physical documents when no longer needed.
- f.**

Remote Access: Only via secure VPN and on company-approved devices.

4.4.2. Internal Use Information (e.g., internal procedures, non-sensitive project plans): a. Storage: Stored on company network drives, SharePoint, or approved cloud services. Physical documents in general office areas but not publicly accessible. b. Access: Access is restricted to Cirque Corporation employees and authorized contractors on a need-to-know basis for internal business purposes. c. Transmission: Typically via internal email or company messaging platforms (Teams). For external sharing, consider basic encryption if content is not public. d. Processing: Processed on company devices. Exercise caution on personal devices. e. Physical Handling: Keep in secure office areas. Shred physical documents before discarding.

4.4.3. Public Information (e.g., marketing materials, public website content): a. Storage: May be stored in publicly accessible folders or on the company website. b. Access: No restrictions on access. c. Transmission: May be shared via any unencrypted method. d. Processing: Can be processed on any device. e. Physical Handling: No specific handling requirements beyond general office waste.

4.5. Physical Asset Handling and Protection (US and Taipei Offices) a. Entry Controls: All visitors must sign in and be escorted by an employee. Access badges for employees are mandatory. b. Securing Areas: Critical areas (e.g., server rooms, manufacturing floors, design labs where CAD/ASIC work occurs) will have stricter access controls (e.g., keycard access, biometric scanners if applicable). c. Clean Desk Policy: All personnel must maintain a clean desk, especially in areas where sensitive information is handled, ensuring no confidential documents are left unattended. d. Equipment Security: Workstations and equipment will be physically secured to prevent theft where practical. e. Environmental Controls: Monitoring for temperature, humidity, and fire suppression in server rooms and critical manufacturing areas.

4.6. Secure Disposal of Assets a. Data Sanitization: * Electronic Media (Hard Drives, SSDs, USBs): Data on media classified as Confidential or Internal Use must be securely wiped using industry-recognized methods (e.g., NIST SP 800-88 guidelines for sanitization) or physically destroyed (e.g., shredding, degaussing) prior to disposal or re-use. * Cloud Data: Ensure data is properly deleted from cloud services following service provider's secure deletion processes. b. Physical Documents: Confidential and Internal Use hard copy documents must be cross-shredded or incinerated when no longer required. c. Hardware Disposal: All hardware (laptops, servers, mobile devices) must have their data-bearing components sanitized or destroyed before being recycled, sold, or discarded. The IT Manager will oversee this process.

5. Review and Update

This procedure will be reviewed at least annually, or sooner if there are changes to IS-CIRQ-P-007-G: Asset Management Policy, changes in asset types, new threats, or updates to legal/regulatory requirements.
