

Cirque Corporation

Antivirus and Endpoint Protection Policy

Document ID: IS-CIRQ-P-036-G

Category: Technical Controls

Division: Policy

Type: Global

Version: 1.0

Effective Date: March 2026

Review Date: March 2027

Approved By: CTO, CISO

Generated: March 02, 2026

1. Introduction

Malware, viruses, and other malicious software pose significant threats to Cirque Corporation's information systems and data.

2. Purpose

This policy establishes requirements for antivirus and endpoint protection software to detect, prevent, and respond to malicious software threats.

3. Scope

This policy applies to all workstations, laptops, servers, mobile devices, and other endpoints that access Cirque systems or data.

4. Antivirus Software Requirements

All endpoints must have approved antivirus/endpoint protection software that provides:

- Real-time scanning and protection
- On-demand and scheduled scanning
- Automatic signature updates
- Heuristic and behavioral analysis
- Ransomware protection
- Web and email filtering

- Centralized management and reporting

5. Approved Solutions

Cirque uses the following endpoint protection solutions:

- Microsoft Defender for Endpoint (primary solution)
- Additional solutions as approved by IT management

Personal or unauthorized antivirus software is prohibited.

6. Installation and Configuration

Antivirus software shall be:

- Installed before connecting to network
- Configured with company-approved settings
- Managed through centralized console
- Set to automatic updates for signatures and software
- Configured for real-time protection (cannot be disabled by users)

7. Scanning Requirements

Systems shall be configured for:

- Real-time scanning of all file access operations
- Scheduled full system scans (at least weekly)
- Scan of all removable media upon insertion
- Scan of all email attachments and downloads
- Regular scans of servers (daily for critical systems)

8. Signature Updates

Antivirus signatures must be:

- Updated automatically at least daily
- Verified as current (not more than 48 hours old)
- Monitored through central console
- Manually updated if automatic updates fail

9. Threat Response

When malware is detected:

- Infected files automatically quarantined
- User notified of detection
- IT security team alerted for high-severity threats
- Incident response procedures followed for serious infections
- Affected system isolated if necessary
- Remediation actions documented

10. Monitoring and Reporting

IT security team shall:

- Monitor antivirus console for alerts and infections
- Review scan logs and detection reports
- Verify all systems have current protection
- Identify systems with disabled or outdated protection
- Report metrics to management monthly

11. User Responsibilities

All users must:

- Keep antivirus software enabled at all times
- Not disable or circumvent antivirus protection
- Report suspected malware infections immediately
- Not open suspicious email attachments
- Exercise caution when downloading files

12. Exceptions

Temporary disabling of antivirus requires:

- Valid business justification
- Approval from IT Manager
- Limited duration (maximum 24 hours)
- Compensating controls (network isolation, etc.)
- Re-enable verification

13. Mobile Devices

Company-owned and BYOD devices accessing company data must:

- Have approved mobile security software installed
- Comply with mobile device management policies
- Regular security scans performed
